INTRODUCTION

About this Directory

This address and telephone list was prepared by the Center for the Utilization of Federal Technology (CUFT) as part of its effort to develop communications between Government technology transfer groups. It represents an ongoing attempt by CUFT to maintain an accurate listing of agency and laboratory contacts. If errors are found, or corrections needed, a return correction form is provided at the back of this publication. Changes to this publication will be sent out as needed.

For information about laboratory funding, staff size, and the mission objectives of various laboratories, contact Mr. Jim Wyckoff, Room A402, National Bureau of Standards, Washington, D.C. 20234 and ask for a copy of the publication Federal Laboratory Directory 1982. This special report was prepared by the National Bureau of Standards and the Federal Laboratory Consortium

About the Center for the Utilization of Federal Technology

The Stevenson-Wydler Technology Innovation Act was enacted to encourage the transfer of Federal technology to the U.S. economy. It requires each Federal agency conducting R&D and its major laboratories to identify technology having potential commercial or practical application and to take steps to encourage the transfer of this technology. As part of this effort, agencies and their laboratories have established Offices of Research and Technology Assessment (ORTA), or are using existing technology transfer offices, to locate and identify potential practicable technologies. Along with the establishment of these offices, the law also created the Center the the Utilization of Federal Technology (CUFT).

CUFT has two major tasks: to encourage agencies to evaluate their technologies and identify those with the highest commercial or practical application; and to develop information awareness products and services which can be disseminated to the public and private sector. Therefore, CUFT functions are (1) to help in the coordination and communication of technology transfer efforts between all agencies, (2) to work with agencies and their laboratories in evaluating and highlighting newly developed technologies, and (3) to create easy to use information tools for the tens of thousands of potential Federal technology users. A description of some of these information services are presented at the end of this booklet.

AGENCY & LABORATORY CONTACTS

PRODUCTS & SERVICES

A variety of products and services has been planned and developed to improve industry access to practical Government technology. Some of these include:

1. Current awareness fact sheets

A monthly subscription service is now available which alerts readers to the latest Federal technology. Called Tech Notes, this service provides one or two-page fact sheets describing new processes, equipment, materials, and techniques chosen to have potential commercial or practical application. The 80 to 100 fact sheets announced monthly are offered in ten different subject categories. The annual Federal Technology Catalog is provided free to subscribers.

2. Federal Technology Catalog *

This annual catalog offers a compilation and index to more than 1,200 new technologies. These technologies represent some of the best Government research and engineering efforts for the year. Brief summaries of technologies are arranged into ten subject categories to allow a reader to browse easily. These summaries not only describe the technology but more importantly give a source for further information. A comprehensive subject index is included.

5. Federal Technology Resource Guide *

Designed for use by both large and small businesses which are technology oriented, this guide describes special technical resources provided by Federal agencies and their laboratories. These resources include contacts who offer equipment for sharing, technical information centers, laboratory contacts available for technology interchange, software sources, information analysis centers, as well as other services which will allow industry to become more productive by taking advantage of existing Federal facilities and "know how" (Available Nov. 1983)

6. Data Base Guide *

This free guide provides computer online searchers an easy to use reference. It describes both Tech Notes and Government inventions and explains both the value of these two collections and the ease in searching them. Online computer searching is seen as the most effective means of providing easy access to this applied Federal technology.

CUFT will also provide other services depending upon its resources. One mechanism to strengthen the link between industry and Federal technology involves special industry association visits to Federal laboratories. Previous group meetings and tours have proved effective and of mutual interest to both industry and Government.

* These catalogs and brochures will be supplied as they are issued to agency technology transfer offices for use as referral tools.

3. Government Inventions Catalog *

Government inventions are based on technology meeting patent office requirements of novelty and utility. This catalog provides easy access to the technology covered by these inventions. Therefore, it serves two functions: (1) to encourage the licensing of Government inventions (often on an exclusive basis) and (2) to present the technology of these inventions in an easy to use format. Each annual catalog will contain more than 1,300 summaries of both patents and patent applications arranged into more than 40 application categories for easy browsing. Inventor and subject indexes are included.

Apparatus for Making No-Twist Yarn.

4. Government Inventions for Licensing Abstract Newsletter

A weekly subscription bulletin summarizes more than 1,300 Government owned inventions annually. Each issue divides inventions into eleven subject disciplines and provides a summary of each. When appropriate, a drawing of the invention is also included. Since many of these inventions are available for licensing, often on an exclusive basis, this bulletin offers a valuable service for transferring Federal technology to industry. The previously mentioned Government Inventions Catalog is provided free to subscribers of this abstract newsletter.
