Dear SUPA Meeting Attendees:

~~At today's meeting you heard about~~ USET, ~~the~~ new ~~University Science, Engineering and Technology corporation and some of its planned activities. USET helps~~ to solve the problem of moving university, federal laboratory and industry technology to the market place. ~~This is to acquaint you with those efforts.~~

is a division of well communications Corp of Greenwich, Conn. and is ~~a~~ subsidiary of the Pergamon Press Complex.

is developing Our activities will be conducted on a world-wide basis.

USET ~~will provide~~ a number of services aimed at facilitating the use of the results of Government investment in research and development. We know that universities in particular have had difficulty locating the resources and staff necessary to manage these results. Also internal ~~politics~~ sometimes frustrate these activities interna and politiques

Changing Government policy has provided a supportive environment for universities and USET. The primary thrust of government efforts to increase commercialization of federally financed R&D results has been toward decentralizing technology management by permitting the creating organization and its investigators, whether at a university or federal laboratory, to own, and thereby benefit from application of their technology. These policy changes were driven by the realization that successful transfer must be a win-win situation in which all participants must benefit from the result. This was accomplished through legislative changes that permit federally-funded universities and federal laboratories to license technology on an exclusive, royalty-bearing basis. The legislation creates a powerful incentive by also requiring that part of the royalty return be shared with the inventors that produced it.

While we offer new we developing added services and we have recently made. I'll describe them later.

I had the privilege of testifying before Congress on PL 96-517 ~~PL 98-620~~ and PL 99-502

Two Executive Orders ~~#12591~~ and #12618

OMB A-124

37 C.F.R. 401

In addition, increased global competition ~~points to~~ supports the need for ~~USET~~. Corporations increasingly seek product innovations from the outside as a response to foreign competition. Traditionally, new products or product improvements have come from internal research and development and/or acquisitions of small companies. The commercialization of federally funded research will provide new product opportunities for U.S. industry.

PA Journal proves the services USET is planning.

USET's clients ~~will~~ include universities, federal laboratories and industry. Initially, universities ~~and government laboratories~~ will serve as the primary source of technology and research expertise. As USET grows, these interactions will change to find new innovative ways of technological management and exchange.
