Abstract

The article written by the authors makes a thorough investigation and study concerning intellectual property courses in universities of science and engineering on the basis of the teaching practice of educating the seniors in the intellectual property.

A course such as this is an essential part of comprehension training for modern scientists and technicians. The article goes further into the necessity, teaching content and teaching method of intellectual property courses offered in universities of science and technology which train the students to be modern qualified scientists and technicians. The author takes many kinds of methods in teaching classes. What is called "teaching only the essential" is to explain the main points and the difficult points. The essential purpose of classroom discussion is to organize the student's ideas about the main point of the course. Practical training is one of the features of this intellectual property course. Social investigation is to enable the students to analyze and study by means of knowledge learned from questions about intellectual property right arising in the field of commodity economy.

This teaching method can enable the students not only to systematically master the basic theoretical knowledge of this course, but also to learn how to look up documentation and to analyze and study social phenomena.
